

SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Artificial Intelligence and Data Science

ASSESSMENT TOOL 1 – Pattern Recognition and Text Processing

Course Code:	DSA03	Course Title:	Natural Language Processing
CO Assessed:	CO1 – Imitation (L1)	Assessment:	Assessment Tool 1 – Pattern Recognition and Text Processing
Weightage:	40% of CIA		
CO5 Statement:	Analyse regular expression patterns. (BL-3)		
Student Name:	Aswanth N N	Reg. No.:	192424123
Section / Batch:	2024	Date:	11.07.2026

Code of Conduct

I Aswanth N N (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the Student: _____

Instructions

- Show all intermediate steps, calculations, state transitions, and reasoning wherever applicable.
- Use only the Python re (Regular Expressions) module to solve the given problems.
- Clearly mention the Regular Expression (Regex) pattern used before writing the corresponding Python program.
- Display the required output for each question, including extracted values, validation results, counts, and positions wherever applicable.
- Duration: 30 minutes.

Section / Topic	Focus	Q Nos
Regular Expression Pattern Generation	Pattern Matching Information Extraction	1
Search for a String	Keyword Search and Text Analysis	2
Split the documentation into sentences and words	Text Tokenization and Sentence Segmentation	3
Email and Strong Password Validation	Data Validation and Format Verification	4
Compile Once, Validate Many	Pattern Reusability and Performance Optimization	5

Section 1: Regular Expression Pattern Generation

Student Details:

Name: John Doe

Email: john.doe123@gmail.com

Mobile: +91-9876543210

Password: P@ssw0rd123

Date of Birth: 15/08/2004

Register Number: 23AIML1056

Department: Artificial Intelligence and Machine Learning

For the given student details formulate Regex patterns for the following:

Email ID

Mobile Number

Strong Password

Date of Birth (DD/MM/YYYY)

Register Number

Section 2: Search for a String

Artificial Intelligence (AI) is transforming industries across the world. AI is used in healthcare to assist doctors in diagnosis, in banking to detect fraud, and in education to provide personalized learning experiences. Many companies invest heavily in AI research because AI improves efficiency and enables intelligent decision-making. As AI continues to evolve, professionals with AI skills are in high demand.

Write a Python program using the re module to perform the following operations for the word "AI":

1. Find the first occurrence of the word "AI" using re.search().
2. Display the starting position of the first occurrence.
3. Display the ending position of the first occurrence.
4. Display the total number of times the word "AI" appears in the passage.
5. Print an appropriate message if the word is not found.

Section 3: Split the documentation into sentences and words

Refer the previous passage and Write a Python program using the re.split() method to perform the following operations:

- Split the passage into sentences using appropriate punctuation (., ?, !) as delimiters.
- Count and display the total number of sentences.
- Split the passage into words by considering one or more whitespace characters as delimiters.
- Count and display the total number of words.
- Display the list of extracted sentences and words.

Section 4: Email and Strong Password Validation

A website requires users to register by providing an Email ID and a Strong Password. Write a Python program using the re module to validate the following inputs.

Validation Criteria:

Email ID

- Must begin with one or more letters or digits.
- May contain ., _, %, +, or - before the @ symbol.
- Must contain a valid domain name.
- Must end with a valid domain extension such as .com, .org, .edu, or .in.

Strong Password

- Must contain at least 8 characters.
- Must contain at least one uppercase letter.
- Must contain at least one lowercase letter.
- Must contain at least one digit.
- Must contain at least one special character from @, #, \$, %, &, !, or *.
- Must not contain any whitespace characters.

Section 5: Compile Once, Validate Many

A company receives 1,000 email IDs from its customers and needs to validate each one efficiently. Instead of compiling the same regular expression for every email, write a Python program using the re.compile() method to compile the pattern once and reuse it to validate all the email IDs.

Rubrics for Calculation

Criteria	Weightage	Level 4 – Exemplary (5 Marks)	Level 3 – Proficient (4 Marks)	Level 2 – Developing (2–3 Marks)	Level 1 – Beginning (0–1 Mark)
Conceptual Understanding	30	Demonstrates clear and complete understanding of the concept	Good understanding with minor gaps	Basic understanding with some misconceptions	Poor or incorrect understanding
Accuracy of Answer	25	Completely correct answer with no errors	Mostly correct with minor errors	Partially correct with noticeable errors	Incorrect or irrelevant answer
Application of Knowledge	20	Correctly applies concepts to solve the question/problem	Applies concepts with minor mistakes	Limited or partially correct application	No or incorrect application
Completeness of Response	15	Covers all required parts of the question	Covers most parts with minor omissions	Covers only some parts	Incomplete or missing response
Clarity & Presentation	10	Clear, concise, and well-organized answer	Understandable with minor issues	Somewhat unclear or poorly structured	Difficult to understand

Q. No. / Criteria	Conceptual Understanding	Accuracy of Answer	Application of Knowledge	Completeness of Response	Clarity & Presentation	Sub. Total	Total %
1	3	3	3	4	4	17	81
2	3	3	3	4	4	17	
3	3	3	3	4	4	17	
4	3	3	3	3	3	15	
5	3	3	3	3	3	15

Section 1: Regular Expression Pattern Generation

Aim

To formulate regular expression patterns for different student details.

Code

```
import re

text = """
Name: John Doe
Email: john.doe123@gmail.com
Mobile: +91-9876543210
Password: P@ssw0rd123
Date of Birth: 15/08/2004
Register Number: 23AIML1056
Department: Artificial Intelligence and Machine Learning
"""

# Regex Patterns
email_pattern = r'[A-Za-z0-9._%+-]+@[A-Za-z0-9.-]+\.(com|org|edu|in)'
mobile_pattern = r'\+91-\d{10}'
password_pattern = r'^(?=[A-Z])(?=.*[a-z])(?=.*\d)(?=.*[@#$%&!*])[A-Za-z\d@#$%&!*]{8,}$'
dob_pattern = r'\b(0[1-9]|[12][0-9]|3[01])/(0[1-9]|1[0-2])/d{4}\b'
reg_pattern = r'\b\d{2}[A-Z]{4}\d{4}\b'

print("Email:", re.search(email_pattern, text).group())
print("Mobile:", re.search(mobile_pattern, text).group())
print("Date of Birth:", re.search(dob_pattern, text).group())
print("Register Number:", re.search(reg_pattern, text).group())

password = "P@ssw0rd123"
if re.match(password_pattern, password):
    print("Password:", password)
```

Output

```
1 import re
2
3 text = """
4 Name: John Doe
5 Email: john.doe123@gmail.com
6 Mobile: +91-9876543210
7 Date of Birth: 15/08/2004
8 Register Number: 23AIML1056
9 Password: P@ssw0rd123
10
11 ...Program finished with exit code 0
12 Press ENTER to exit console.
13
```

Section 2: Search for a String

Aim

To search for the word "AI" using Python Regular Expressions.

Code

```
import re

text = """Artificial Intelligence (AI) is transforming industries across the world.
AI is used in healthcare to assist doctors in diagnosis, in banking to detect fraud,
and in education to provide personalized learning experiences.
Many companies invest heavily in AI research because AI improves efficiency
and enables intelligent decision-making.
As AI continues to evolve, professionals with AI skills are in high demand."""

match = re.search(r'\bAI\b', text)

if match:
    print("First occurrence:", match.group())
    print("Starting Position:", match.start())
    print("Ending Position:", match.end())

count = len(re.findall(r'\bAI\b', text))
print("Total Occurrences:", count)

if not match:
    print("AI not found.")
```

Output

```
First occurrence: AI
Starting Position: 25
Ending Position: 27
Total Occurrences: 6

...Program finished with exit code 0
Press ENTER to exit console.
```

Section 3: Split the Documentation into Sentences and Words

Aim

To split a passage into sentences and words using `re.split()`.

Code

```
import re

text = """Artificial Intelligence (AI) is transforming industries across the world.
AI is used in healthcare to assist doctors in diagnosis, in banking to detect fraud,
and in education to provide personalized learning experiences.
Many companies invest heavily in AI research because AI improves efficiency
and enables intelligent decision-making.
As AI continues to evolve, professionals with AI skills are in high demand."""

# Split into sentences
sentences = re.split(r'[.!?]+', text)
sentences = [s.strip() for s in sentences if s.strip()]

print("Sentences:")
for s in sentences:
    print(s)

print("\nTotal Sentences:", len(sentences))

# Split into words
words = re.split(r'\s+', text)
```

```
print("\nWords:")
print(words)

print("\nTotal Words:", len(words))
```

Output

```
Sentences:
Artificial Intelligence (AI) is transforming industries across the world
AI is used in healthcare to assist doctors in diagnosis, in banking to detect fraud,
and in education to provide personalized learning experiences
Many companies invest heavily in AI research because AI improves efficiency
and enables intelligent decision-making
As AI continues to evolve, professionals with AI skills are in high demand

Total Sentences: 4

Words:
['Artificial', 'Intelligence', '(AI)', 'is', 'transforming', 'industries', 'across', 'the', 'world.', 'AI', 'is', 'used', 'in', 'healthca',
re', 'to', 'assist', 'doctors', 'in', 'diagnosis,', 'in', 'banking', 'to', 'detect', 'fraud,', 'and', 'in', 'education', 'to', 'provide',
'personalized', 'learning', 'experiences.', 'Many', 'companies', 'invest', 'heavily', 'in', 'AI', 'research', 'because', 'AI', 'improves',
', 'efficiency', 'and', 'enables', 'intelligent', 'decision-making.', 'As', 'AI', 'continues', 'to', 'evolve,', 'professionals', 'with',
'AI', 'skills', 'are', 'in', 'high', 'demand.']

Total Words: 60

...Program finished with exit code 0
Press ENTER to exit console.
```

Section 4: Email and Strong Password Validation

Aim

To validate Email IDs and Strong Passwords using Regular Expressions.

Code

```
import re

email = input("Enter Email: ")
password = input("Enter Password: ")

email_pattern = r'^[A-Za-z0-9][A-Za-z0-9._%+-]*@[A-Za-z0-9.-]+\.(com|org|edu|in)$'

password_pattern = r'^(?=.*[A-Z])(?=.*[a-z])(?=.*\d)(?=.*[@#%&!*])[A-Za-z\d@#%&!*]{8,}$'

if re.match(email_pattern, email):
    print("Valid Email")
else:
    print("Invalid Email")

if re.match(password_pattern, password):
    print("Strong Password")
else:
    print("Weak Password")
```

Sample Output

```
Enter Email: xyx@gmail.com
Enter Password: Xyz123
Valid Email
Weak Password

...Program finished with exit code 0
Press ENTER to exit console.
```

Section 5: Compile Once, Validate Many

Aim

To compile a regular expression once and reuse it to validate multiple Email IDs efficiently.

Code

```
import re

emails = [
    "john@gmail.com",
    "student@college.edu",
    "abc123@yahoo.in",
    "wrongemail@",
    "hello.com"
]

pattern = re.compile(r'^[A-Za-z0-9][A-Za-z0-9._%+-]*@[A-Za-z0-9.-]+\.(com|org|edu|in)$')

for email in emails:
    if pattern.match(email):
        print(email, "-> Valid")
    else:
        print(email, "-> Invalid")
```

Output

```
john@gmail.com -> Valid  
student@college.edu -> Valid  
abc123@yahoo.in -> Valid  
wrongemail@ -> Invalid  
hello.com -> Invalid
```

```
...Program finished with exit code 0  
Press ENTER to exit console. 
```
